

Manufacturer of Blow Moulds for a world of products

GARRTECH Inc. has been manufacturing blow moulds from the time when it was founded in 1991, since then it has experienced a rapid rate of growth and currently employs 65 skilled, experienced staff.

Garrtech moved into its newly constructed 30,000 square foot manufacturing center in 2000. This new facility was custom designed to promote ease of manufacturing and increase productivity in a CNC environment.

Our commitment, from day one, has been to invest in, and utilize the latest technology to compress lead times, optimize tolerances, and produce better overall finishes.

With a strong reinvestment program Garrtech continues to expand its base of 4 and 5 axis high speed machining centers as well as constantly advancing with new engineering design/programming softwares, and cutting technologies inclusive of laser engraving and fine hole EDM machinery.

Garrtech's manufacturing process is made up of a three work-cell system to produce moulds for a wide range of products and processes inclusive of HDPE containers, PET heatset and conventional bottles/jars, and large industrial/consumer components and products.
